

Round Up, Round Down Toss Game

You will need:

- Decimal Cards
- 2 baskets for each group labeled "Round Up" and "Round Down"

How to play:

Students will stand a certain distance from the baskets and draw a card with a decimal number on it. Students must evaluate the question on the card. Once the student determines the answer, they may ball up the card and toss the paper ball into the correct basket. If the student would round up to solve the problem, they throw the paper ball in the "Round Up" basket. If they round down to solve the problem, they throw the paper ball into the "Round Down" basket. To play again, the students can "un-ball" the cards and leave them in a stack for the next players.
